## **Call for grantee(s) within OpenSense Short-Term Scientific Mission Grant**

The multidisciplinary research group of CNR and Politecnico di Milano, which brings together skills in the fields of wireless telecommunications and hydrology welcomes grantees for Short Term Scientific Missions (STSMs) related to the topics of OpenSense Action.

We have a huge database including 260 commercial microwave links (CML), a rain gauge network, disdrometers and weather radar data. We published some of our research results on scientific journals [1][2].

Grantee visiting CNR-Politecnico can contribute to one of the following research projects:

- Meteorological application:
  - 2D reconstruction of rainfall fields by interpolation and/or tomography from CML and merging of CML+RG data;
  - detection and quantification of extreme rainfall events by CML and CML+RG and comparison with radar measurements
- Hydrological application: use CML data into the hydrological model of a peri-urban area and compare it with radar-driven hydrological simulations.

Required skills: rainfall sensors, signal processing, hydro-meteorology (depending on the chosen application). Soft skills are appreciated as you will have the opportunity to work together with experts from different research areas.

The preferred duration of STSM is upon the applicant. The proposal has to meet all the criteria given in First Call for STSM (Short-Term Scientific Mission) – 2022 and also general eligibility criteria given by COST Association for STSM grants.

Details on application rules are here:
